## H SERIES HIGH PRESSURE PUMPS

H series pumps are closed impeller, multistage pumps and they are used for middle and high pressure pumping applications in industry extensively. Pump pressure can be raise from 1 bar to 25 bar due to multistage pump construction. When the pumps work as serial it possible to reach higher pressure.

The main applications of the high pressure pumps;

- CNC lathes,
- CNC machining centers,
- Especially deep hole boring operations,
- Erosion machines,
- Washing processes,
- Cooling systems.

Immersion depth of the high pressure pumps depend on stage quantity. It can be extended by using empty stages.

For example;

Immersion depth of HCB 10 pump is 291 mm but immersion depth of extended type HCB 10/25 is 606 mm (Please contact us for more details).

HCB, HDB and HEB type pumps are mostly used at deep hole boring applications on CNC machine tools. On deep hole boring applications, while work piece are drilled by cutting tool, coolant liquid are sprayed to the work piece get through from cutting tool. So work piece and cutting tool can be cold, metal chips can be thrown out via threads of the drilling tool. High pressure pumps work against the high piping resistance so they increase machining quality and life of the cutting tools.

Figure 27 - H series pumps

High pressure pumps' impellers and diffusers are made of stainless steel (AISI 304) so they have a good chemical resistance against to various chemical liquids. There are O-rings on the diffusers for reaching high pressure and preventing back flow to maintain high efficiency (Figure 29). O-rings are made of Viton for high chemical resistance.

### Mechanical Seal

Mechanical seals are consist of four parts. These parts are; stable part, rotary part, bellows and spring. Mechanical seal materials must be choose according to liquid specifications and pump application type. These materials are shown on table 1.

Components	Type 1	Type 2
Stable Part	SiC	TC
Rotary Part	C	TC
Bellows	Viton	
Spring	Stainless steel	

Table 1 - Materials of the mechanical seals

SiC	: Silicon Carbide
TC	: Tungsten Carbide
C	: Resin-Impregnated Carbon
V	: Viton (FKM)

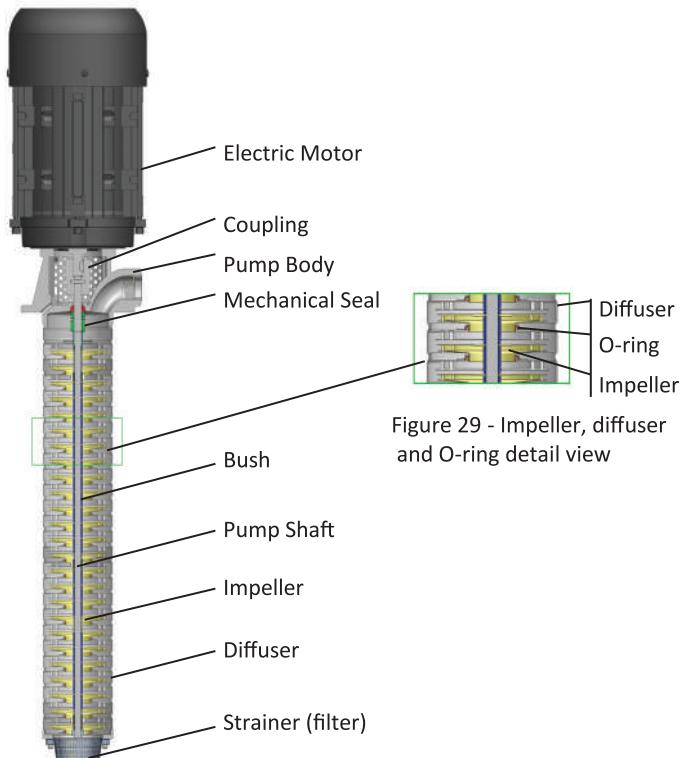

Figure 29 - Impeller, diffuser and O-ring detail view

Figure 28 - H series pump section

## Grinding Applications

If H series pumps will be used on grinding applications or filtration systems for pumping metal chip containing liquids, TC mechanical seals must be chosen. Because TC has a good mechanical resistance against to metal chips. So the pump can work without any problem.

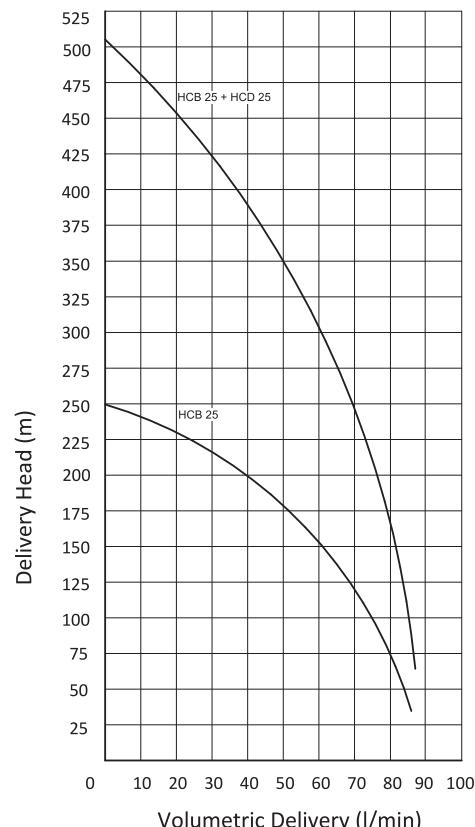

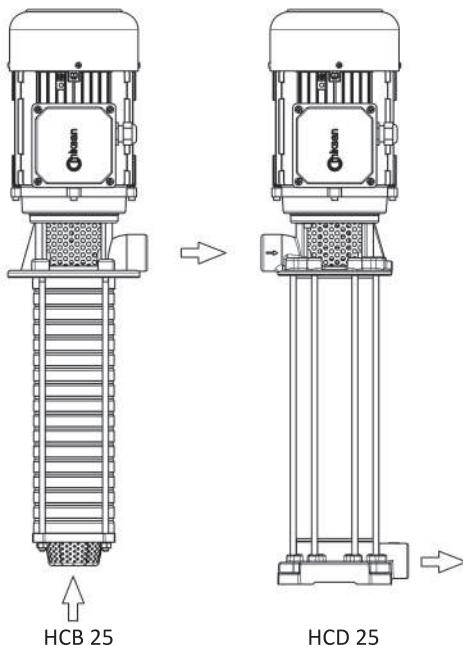

Another important point is that O-ring is not used on the diffuser for these applications. Because metal dusts are abrasive so they can damage to O-rings.

Because of these reasons, H series pumps are produced without O-rings. So delivery head of the pump will be decrease and it must be considered on pump selection.

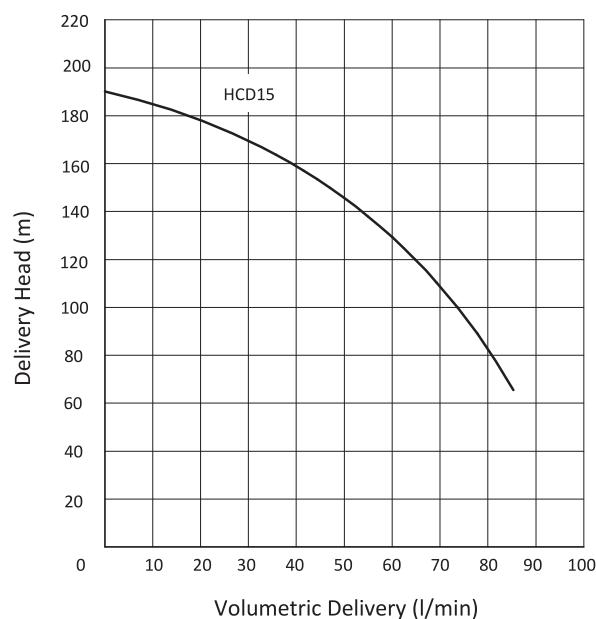

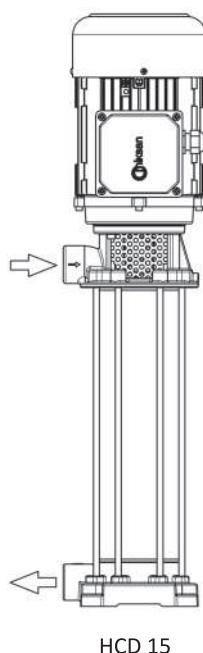

Delivery heads decrease rates are;

HC / HCA / HCB Pumps	: % 17
HD / HDA / HDB Pumps	: % 14
HEB Pumps	: % 7

## Serial Connection of H Series Pump

## With +4 Bar of Positive Head

## HC PUMP

### Applications:

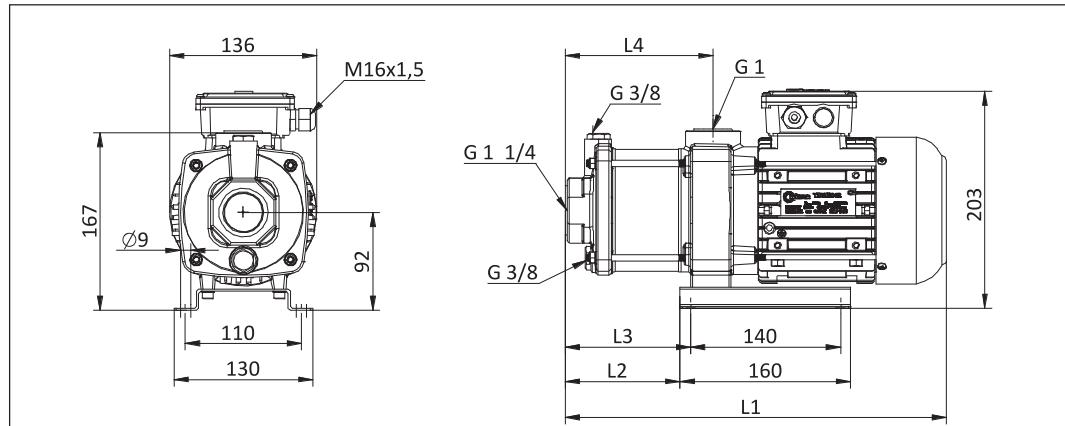

- Cutting, turning, milling, boring, grinding and similar applications of the machine tools,
- Erosion machines,
- Circulation systems. HC Pumps are used for pumping of cutting / cooling fluids.

### Fluid Specifications:

- Coolants,
- Cutting oils,
- Grinding oils,
- Water,
- Fluid temperature 0...80 °C
- Kinematic viscosity 1...30 mm<sup>2</sup>/s

### Materials:

Pump body	: Cast iron - DIN GG 25
Inlet body	: Cast iron - DIN GG 25
Diffuser	: Stainless steel - DIN 4301 (AISI 304)
Impeller	: Stainless steel - DIN 4301 (AISI 304)
Stage cover	: Stainless steel - DIN 4301 (AISI 304)
Pump shaft	: Stainless steel - DIN 4401 (AISI 316)
O-ring	: Viton
Mechanical seal	: C - SiC - Viton TC - TC - Viton (Optional)
Electric motor	: 3 phase induction motor - 2 pole, Protection degree IP 55

### DIMENSIONS & NOMINAL VALUES

HC/07	242	221	211	461	15.5	1.10			4.85/2.8	2720

\* The performance curves are based on 1 mm<sup>2</sup>/s (cSt) kinematic viscosity values and 997 kg/m<sup>3</sup> density

\*\* Curve tolerance according to ISO 9906:2012 Grade 3B.

\*\*\* HC/05, HC/06 and HC/07 pumps have IE2 motors. According to IEC 60034-30-1:2014 standard these pumps are excluded from efficiency class since their motors are completely integrated into the pump.

Performance Curve

## HCA PUMP

### Applications:

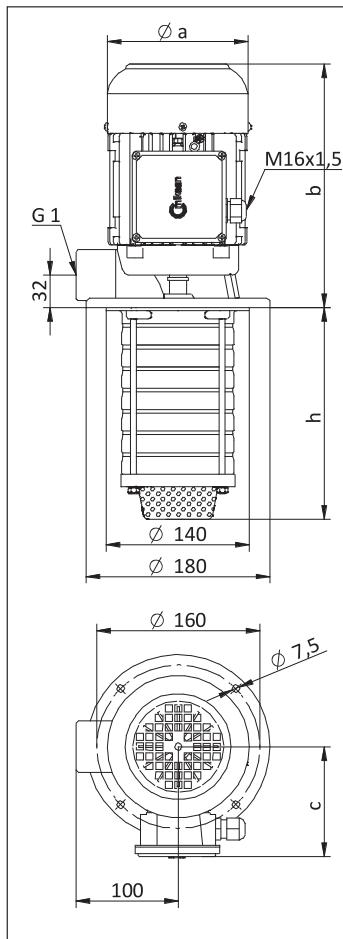

- Cutting, turning, milling, boring, grinding and similar applications of the machine tools,
- Cooling systems,
- Circulation systems. HCA Pumps are used for pumping of cutting / cooling fluids.

### Fluid Specifications:

- Coolants,
- Cutting oils,
- Grinding oils,
- Water,
- Fluid temperature 0...80 °C
- Kinematic viscosity 1...30 mm<sup>2</sup>/s

### Materials:

Pump body	: Cast iron - DIN GG 25
Bottom plate	: Sheet iron
Diffuser	: Stainless steel - DIN 4301 (AISI 304)
Impeller	: Stainless steel - DIN 4301 (AISI 304)
Strainer	: Stainless steel - DIN 4301 (AISI 304)
Pump shaft	: Stainless steel - DIN 4401 (AISI 316)
O-ring	: Viton
Mechanical seal	: C - SiC - Viton TC - TC - Viton (Optional)
Electric motor	: 3 phase induction motor - 2 pole, Protection degree IP 55

\*\* Curve tolerance according to ISO 9906:2012 Grade 3B.

\*\*\* HCA/05, HCA/06 and HCA/07 pumps have IE2 motors. According to IEC 60034-30-1:2014 standard these pumps are excluded from efficiency class since their motors are completely integrated into the pump.

Performance Curve

## HCB PUMP

### Applications:

- Cutting, turning, milling, boring, grinding and similar applications of the machine tools,
- Especially used for deep hole boring operations due to supply 25 bar pressure,
- Circulation systems. HCB Pumps are used for pumping of cutting / cooling fluids.

### Fluid Specifications:

- Coolants,
- Cutting oils,
- Grinding oils,
- Water,
- Fluid temperature 0...80 °C
- Kinematic viscosity 1...30 mm<sup>2</sup>/s

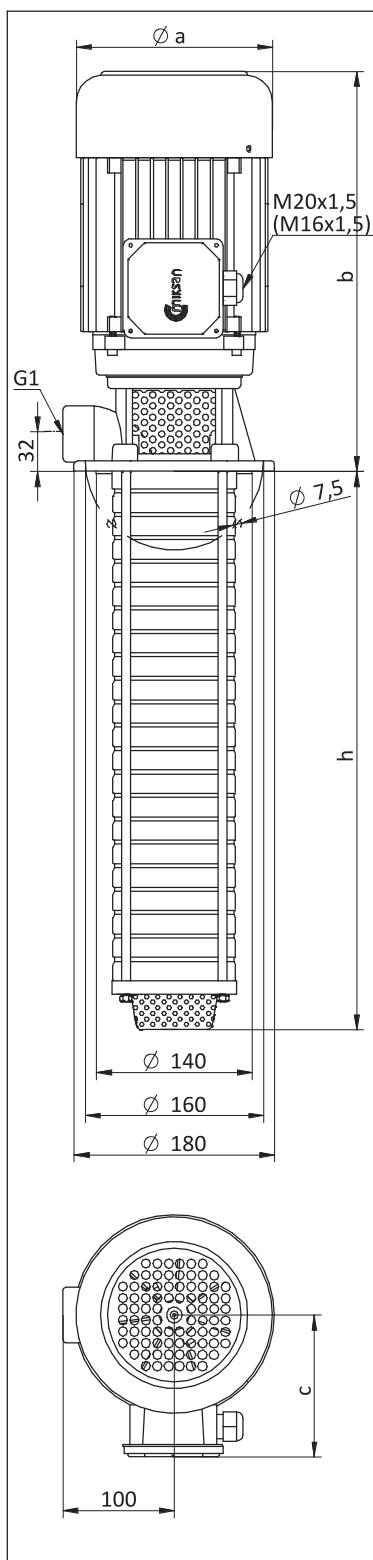

### Materials:

Pump body	: Cast iron - DIN GG 25
Bottom plate	: Sheet iron
Diffuser	: Stainless steel - DIN 4301 (AISI 304)
Impeller	: Stainless steel - DIN 4301 (AISI 304)
Strainer	: Stainless steel - DIN 4301 (AISI 304)
Pump shaft	: Stainless steel - DIN 4401 (AISI 316)
O-ring	: Viton
Mechanical seal	: C - SiC - Viton TC - TC - Viton (Optional)
Electric motor	: 3 phase induction motor IE3 - 2 pole, Protection degree IP 55

\* M16x1,5 cable gland is used on HCB/06 and HCB/08 pumps.

\*\* The performance curves are based on 1 mm<sup>2</sup>/s (cSt) kinematic viscosity values and 997 kg/m<sup>3</sup> density

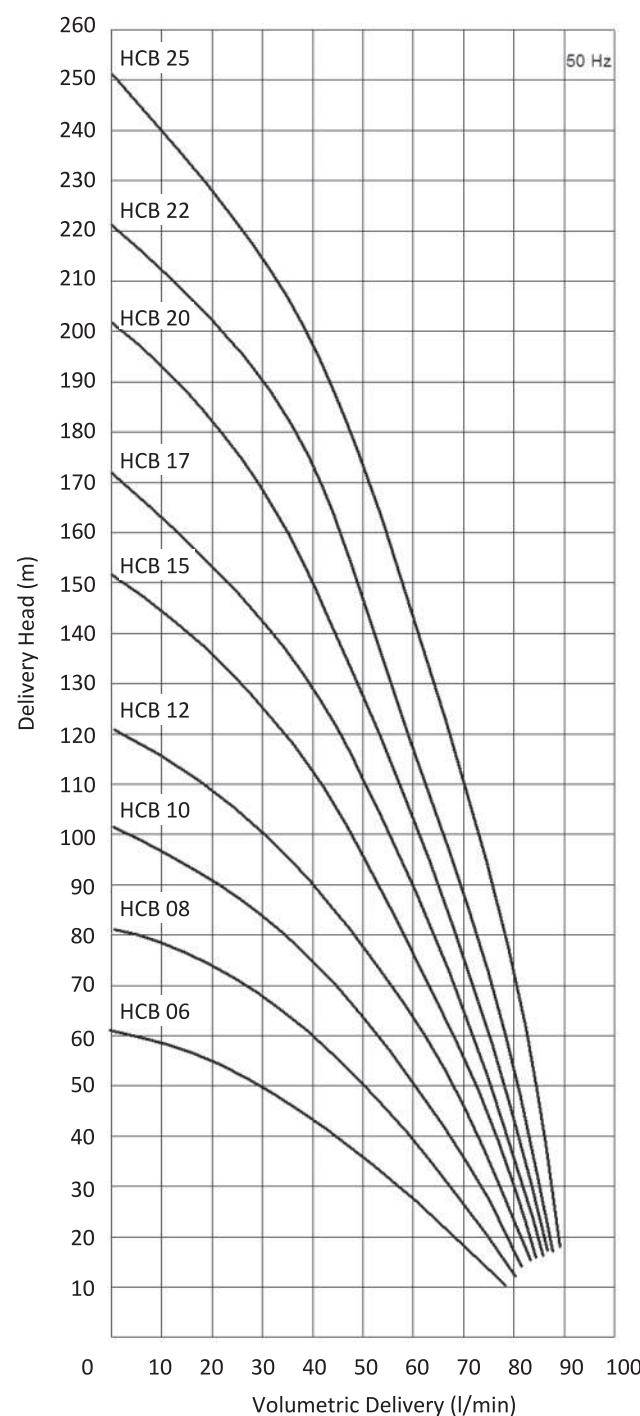

\*\*\* Curve tolerance according to ISO 9906:2012 Grade 3B.

## HDD PUMP

### Applications:

- Cutting, turning, milling, boring, grinding and similar applications of the machine tools,
- Especially used for deep hole boring operations due to supply 25 bar pressure,
- Circulation systems. HDD Pumps are used for pumping of cutting / cooling fluids.

### Fluid Specifications:

- Coolants,
- Cutting oils,
- Grinding oils,
- Water,
- Fluid temperature 0...80 °C
- Kinematic viscosity 1...30 mm<sup>2</sup>/s

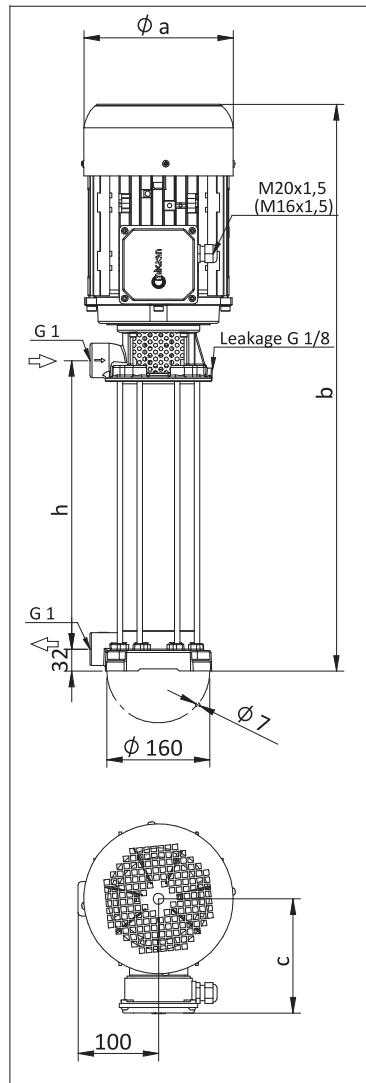

### Materials:

Pump body	: Cast iron - DIN GG 25
Cover	: Cast iron - DIN GG 25
Diffuser	: Stainless steel - DIN 4301 (AISI 304)
Impeller	: Stainless steel - DIN 4301 (AISI 304)
Strainer	: Stainless steel - DIN 4301 (AISI 304)
Pump shaft	: Stainless steel - DIN 4401 (AISI 316)
O-ring	: Viton
Mechanical seal	: C - SiC - Viton TC - TC - Viton (Optional)
Electric motor	: 3 phase induction motor IE3 - 2 pole, Protection degree IP 55

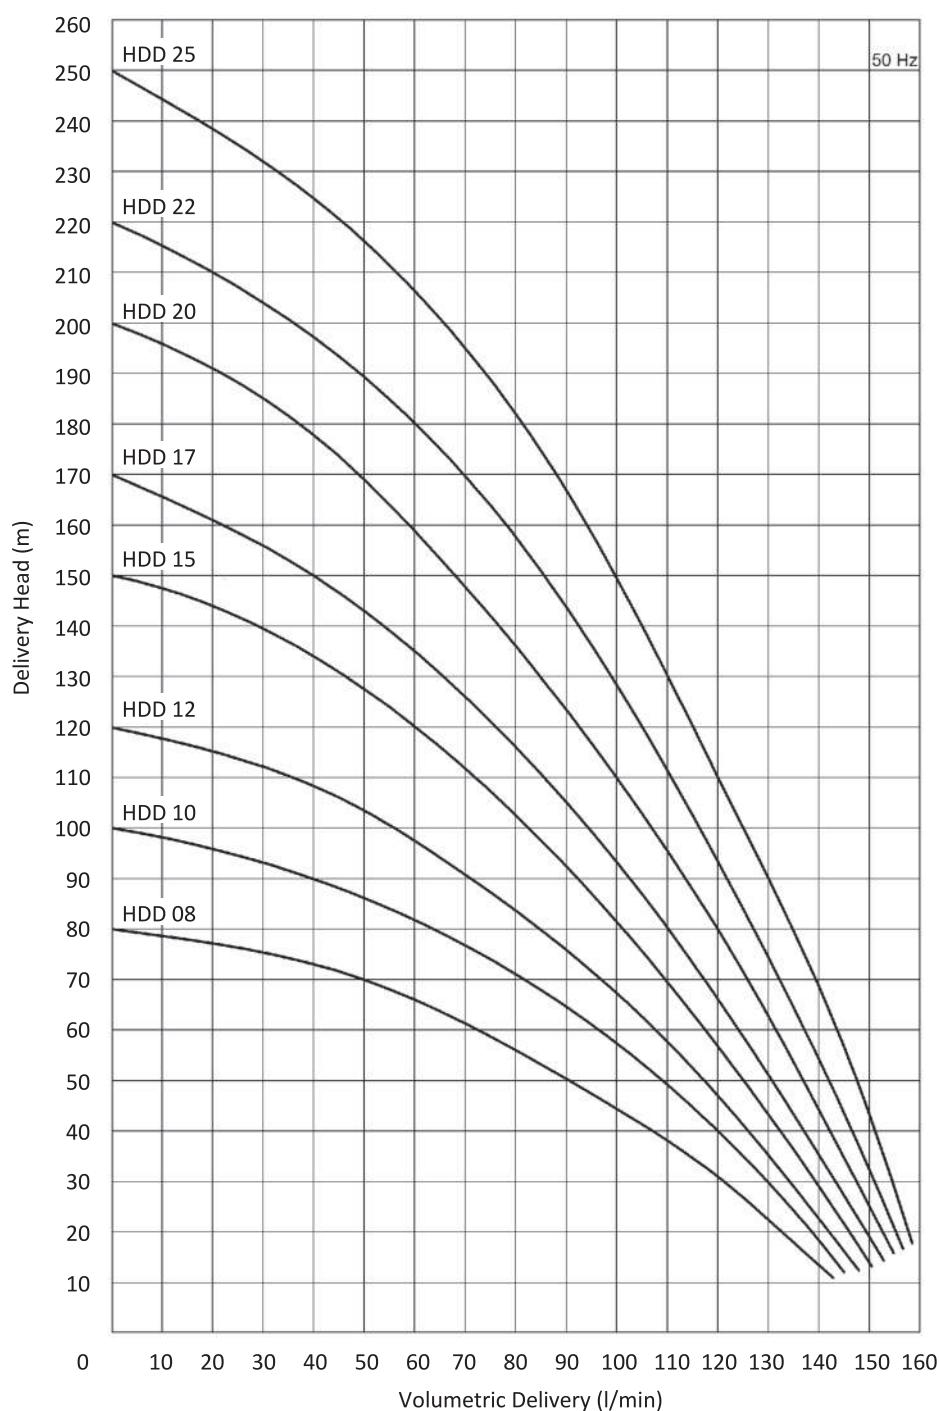

\* M16x1,5 cable gland is used on HDD/08 pump.

\*\* The performance curves are based on 1 mm<sup>2</sup>/s (cSt) kinematic viscosity values and 997 kg/m<sup>3</sup> density

\*\*\* Curve tolerance according to ISO 9906:2012 Grade 3B.

**DIMENSIONS & NOMINAL VALUES**

## HDD PUMP

60 Hz

### Applications:

- Cutting, turning, milling, boring, grinding and similar applications of the machine tools,
- Especially used for deep hole boring operations due to supply 25 bar pressure,
- Circulation systems. HDD Pumps are used for pumping of cutting / cooling fluids.

### Fluid Specifications:

- Coolants,
- Cutting oils,
- Grinding oils,
- Water,
- Fluid temperature 0...80 °C
- Kinematic viscosity 1...30 mm<sup>2</sup>/s

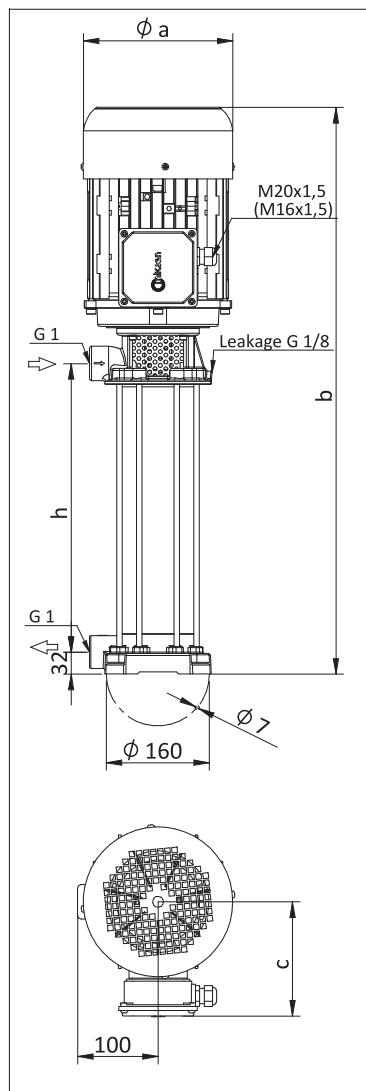

### Materials:

Pump body	: Cast iron - DIN GG 25
Cover	: Cast iron - DIN GG 25
Diffuser	: Stainless steel - DIN 4301 (AISI 304)
Impeller	: Stainless steel - DIN 4301 (AISI 304)
Strainer	: Stainless steel - DIN 4301 (AISI 304)
Pump shaft	: Stainless steel - DIN 4401 (AISI 316)
O-ring	: Viton
Mechanical seal	: C - SiC - Viton TC - TC - Viton (Optional)
Electric motor	: 3 phase induction motor IE3 - 2 pole, Protection degree IP 55

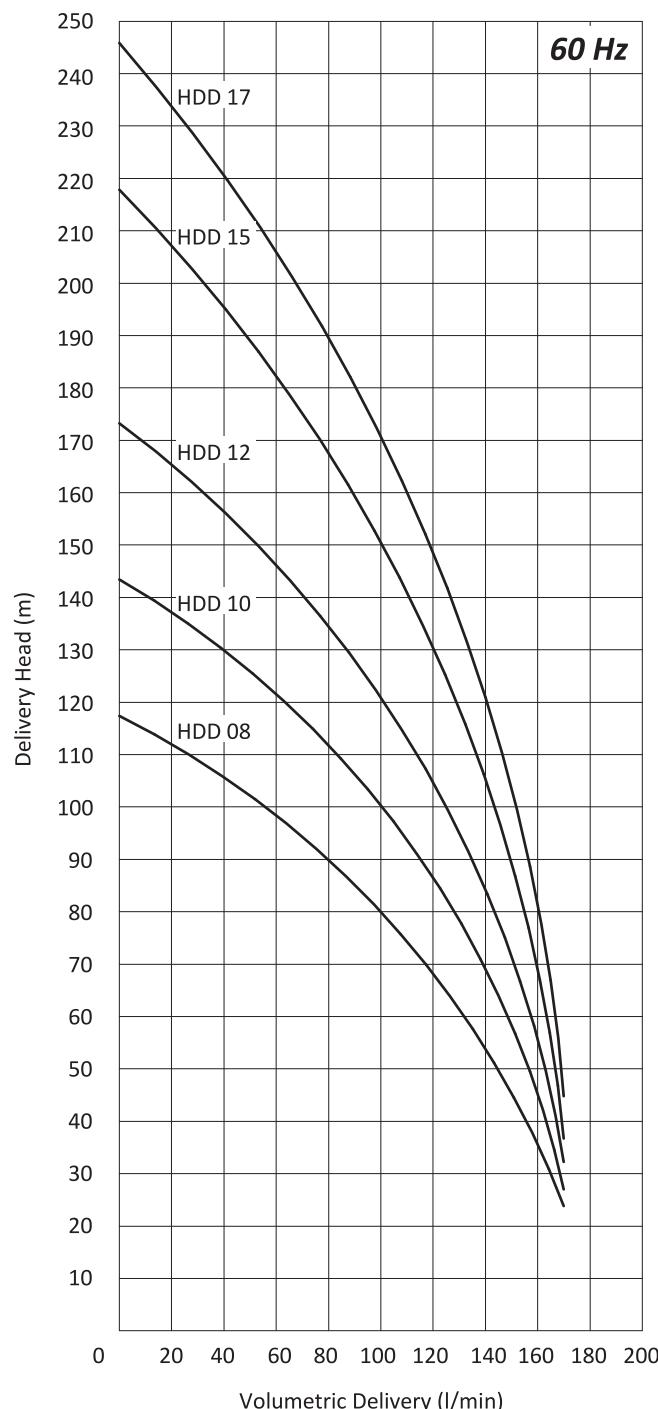

\* M16x1,5 cable gland is used on HDD/08 pump.

\*\* The performance curves are based on 1 mm<sup>2</sup>/s (cSt) kinematic viscosity values and 997 kg/m<sup>3</sup> density

\*\*\* Curve tolerance according to ISO 9906:2012 Grade 3B.

**DIMENSIONS & NOMINAL VALUES**
**60 Hz**

TYPE	Length h (mm)	Weight			Power kW	Voltage V(Δ/Y)	Frequency Hz	Rated current A	Speed rpm
		a	b	c

## HED PUMP

60 Hz

### Applications:

- Cutting, turning, milling, boring, grinding and similar applications of the machine tools,
- Especially used for deep hole boring operations due to supply 23,5 bar pressure,
- Circulation systems. HED Pumps are used for pumping of cutting / cooling fluids.

### Fluid Specifications:

- Coolants,
- Cutting oils,
- Grinding oils,
- Water,
- Fluid temperature 0...80 °C
- Kinematic viscosity 1...30 mm<sup>2</sup>/s

### Materials:

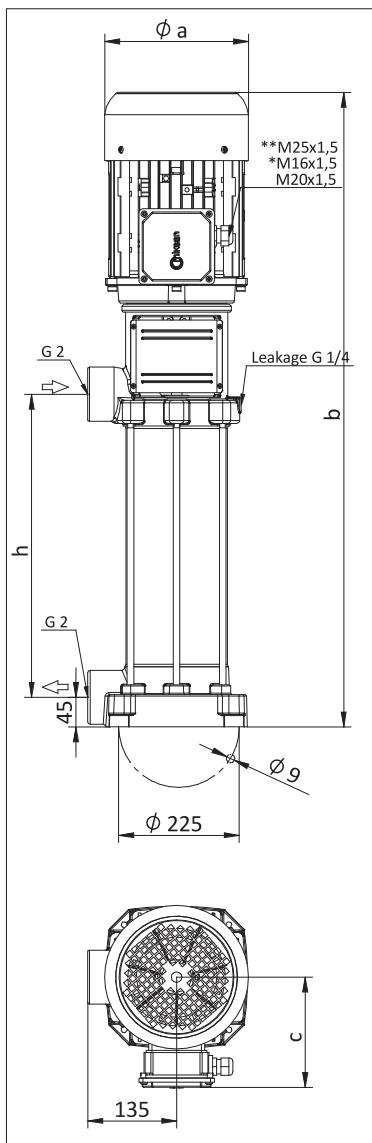

Pump body	: Cast iron - DIN GG 25
Cover	: Cast iron - DIN GG 25
Diffuser	: Stainless steel - DIN 4301 (AISI 304)
Impeller	: Stainless steel - DIN 4301 (AISI 304)
Strainer	: Stainless steel - DIN 4301 (AISI 304)
Pump shaft	: Stainless steel - DIN 4401 (AISI 316)
O-ring	: Viton
Mechanical seal	: C - SiC - Viton TC - TC - Viton (Optional)
Electric motor	: 3 phase induction motor IE3 - 2 pole, Protection degree IP 55

\* M16x1,5 cable gland is used on HED 02 and HED 03 pumps.

\*\* M25x1,5 cable gland is used on HED 16, HED 18 and HED 20 pumps.

\*\*\* The performance curves are based on 1 mm<sup>2</sup>/s (cSt) kinematic viscosity values and 997 kg/m<sup>3</sup> density

\*\*\*\* Curve tolerance according to ISO 9906:2012 Grade 3B.
